

The East Midlands and the Humber has the second highest level of academisation amongst RSC regions, although growth has slowed in the twelve months to September 2016.

1. Academy growth was less than the national average in the secondary sector, but was in line with the primary sector national average.
2. The region has a large number of good and outstanding SATs who could potentially become a MAT and take on sponsorship of underperforming schools in future.
3. Academisation growth over the last 12 months is a mixed picture with the highest academised LAs growing faster in the primary sector and the least academised LAs growing faster in the secondary sector.
4. The level of academisation varies markedly between LAs, from 82 per cent in North-East Lincolnshire to nine per cent in East Riding of Yorkshire.

Although the level of academisation in the region is high, the rate of growth has slowed.

Growth in the secondary sector has been strongest amongst the lowest academised LAs, but the opposite is true in the primary sector.

	Primary	Secondary
Top 5 academised LAs	4.3%	0.8%
Bottom 5 academised LAs	2.2%	4.8%

The level of academisation varies by LA; five LAs have 50 per cent or more of their schools academised while two have fewer than 10 per cent.

The region has the second highest number of academies in starter/established trusts, many of which are good or outstanding.

Key facts: 34 per cent of state schools in the region are academised.
